

Thought Starters for your project: SIGNS & BANNERS

When deciding which Arakawa products will work best for hanging your signs and/or banners, consider these questions before settling on parts or calling to collaborate with one of our knowledgeable project specialists.

1. What is the ceiling material you are hanging from? Would you rather use fixed attachment points or railing?

- The ceiling material will determine which ceiling attachment parts are suitable for the job
- Consider how much changeability your sign/banner display will require. This will help determine whether railing is a good option, or if fixed attachment points for the cables are sufficient.

2. What material and dimensions are your signs?

- Keep in mind that there are dozens of choices for midway grippers to connect to your signs, but the options will depend greatly on their materials and thicknesses.

3. Do you want to attach to through-holes in the signs or grip to the edges of the signs?

- Edge Grippers** - pieces that grip to the edge of materials with fixing screws
- Clevises** - pieces that connect to your signs through predrilled holes in the material

4. For hanging banners, how do you want to attach to the banner?

- The most common option for hanging banners is with rods or dowels that slide through pole pockets at the top and bottom edges of the banner. Arakawa has hang rods in certain sizes that may work for this application, or hardware you can use to attach to your own rods/dowels.

Parts I am considering for my sign/banner hanging project:

•Cable Diameter (based on weight of my heaviest sign/banner): _____

•Ceiling Attachments/Railings: _____

•Rail Clips (if applicable): _____

•Midway Grippers & Attachments: _____

•Floor Attachments & Tensioners (if applicable): _____
